PROFESSIONAL SUMMARY

Backend Developer with 3+ years of experience *specializing in high-concurrency microservices, high-availability financial/transactional backends, and distributed systems*. Dual expertise in C++11 (real-time game server logic, sub-50ms latency) and Java/Spring Boot (microservices, event-driven architecture). Proven track record delivering production backends stress-tested at 10,000+ concurrent users, achieving ~30% DB load reduction and ~25% latency improvement. Hands-on with gRPC/Protobuf, Kafka, RabbitMQ, Redis, and Docker across Agile cross-functional teams.

PROFESSIONAL EXPERIENCE

Backend Developer — High-Concurrency & Microservices (Java & C++)

Gihot Studio

04/2024 – Present

Ho Chi Minh City,
Vietnam

- Engineered scalable Java (Spring Boot) microservices and C++ server-side services supporting 5,000+ concurrent sessions with sub-50ms latency.
- Optimized Redis caching layers and RabbitMQ async pipelines, achieving ~30% DB load reduction and ~20% API response time improvement.
- Conducted stress testing at 10,000+ virtual users, identifying CPU/Memory bottlenecks and executing concurrency tuning to improve overall system throughput by 25%.
- Actively collaborated with cross-functional teams (QA, DevOps, Product, Client) across Agile sprints; provided ad-hoc L2/L3 application support and resolved critical production bugs.

Backend Developer — Java / Spring Boot

Hahalolo Travel Social Network

06/2022 – 05/2023

Ho Chi Minh City,
Vietnam

- Designed and implemented RESTful APIs using Spring Boot, Spring MVC, and Spring Data JPA for a high-traffic social platform.
- Configured Spring Security + JWT authentication with role-based access control (RBAC), securing all platform endpoints against unauthorized access.
- Profiled and optimized complex SQL queries and JPA/Hibernate fetch strategies, cutting query execution time by ~40%.
- Collaborated closely with QA and DevOps teams in Linux/Docker environments for production issue identification, log diagnosis, and rapid bug resolution.

TECHNICAL SKILLS

Languages

Java (8, 17, 21), C++ (C++11/14), JavaScript, TypeScript, HTML5/CSS3, jQuery (basic).

ORM & Databases

Hibernate/JPA, PostgreSQL, MySQL, Redis (distributed caching, pub/sub, rate-limiting, locking).

Messaging & Integration

Apache Kafka, RabbitMQ (async message processing, transactional events).

Frontend (Plus)

ReactJS (basic components & state management), JavaScript/jQuery.

Spring Ecosystem

Spring Boot 3, Spring Framework (Spring MVC, Spring Beans, Spring AOP, Spring Data JPA), Spring Security, Spring Cloud (Gateway, Eureka).

Architecture & Patterns

Microservices, Event-Driven Architecture, RESTful APIs, gRPC (Protobuf), Idempotency, Anti-Corruption Layer, Resilience4j (Circuit Breaker).

DevOps & Tools

Docker, Linux (Ubuntu/CentOS), Git, Maven, Postman, CI/CD.

Performance

SQL query optimization, Redis caching strategies, load testing (10k+ concurrent users), memory & CPU profiling, concurrency tuning

KEY PROJECTS

FPM — Financial Portfolio Manager

10/2025 – Present

Java Backend Engineer

- Architected a 10-service cloud-native financial platform (User-Auth, Wallet, Transaction Engine, Reporting, Notification, OCR, AI) enforcing strict domain boundaries.
- Built high-throughput async pipelines using Apache Kafka (8 topics) for real-time transaction streaming and RabbitMQ for domain event routing (wallet balance update, threshold alerts), ensuring transaction consistency and idempotency.
- Designed and developed secure RESTful APIs (Spring MVC) and internal gRPC services with Protobuf contracts, achieving sub-50ms RPC latency via Anti-Corruption Layer pattern.
- Applied Spring Security + JWT + Redis token blacklisting; implemented Resilience4j Circuit Breaker (50% threshold) and Token Bucket Rate Limiting to safeguard core financial endpoints.
- Utilized Spring Data JPA/Hibernate with optimized PostgreSQL indexing, preventing race conditions during concurrent wallet balance updates using optimistic/pessimistic locking.

Dau Truong Huyen Thoi — Confidential MOBA/MMO Mobile Game (C++ Backend)

02/2025 – Present

Backend Developer

- Architected high-performance event-driven backend; designed Protobuf schema suite for authentication, in-game economy (virtual item/currency transactions), and real-time state synchronization.
- Built Redis-centric data layer for real-time session management, rate-limiting, and pub/sub messaging; engineered thread-safe logic minimizing CPU lock contention to enable horizontal scaling.
- Enforced strict data consistency for virtual currency transactions, preventing race conditions under high-concurrency traffic loads.
- Executed performance profiling, latency benchmarking, and stress-testing (10k+ virtual users); implemented structured logging and observability stack for fast production issue diagnosis.

Sieu Anh Hung Dai Chien — Real-Time Card Battle Mobile Game

04/2024 – 11/2024

Backend Developer (Java / Spring Boot Microservices)

- Built Java / Spring Boot microservices backend for real-time multiplayer systems; optimized resource utilization to achieve 25% bottleneck reduction for 5,000+ concurrent users.
- Engineered high-concurrency socket/REST communication layers using Protobuf; implemented reward distribution and session engines with strict transactional state consistency.
- Developed Admin GM Tool REST APIs (Spring MVC) for live system configuration, data management, and real-time operational monitoring.

EDUCATION & LANGUAGES

Post and Telecommunications Institute of Technology (PTIT)

09/2018 – 12/2023

Bachelor of Engineering — Computer Electronic Engineering

Ho Chi Minh City

English

B1 – Aptis Certificate (ESOL); actively improving towards B2

Vietnamese

Native proficiency
